

# Roadmap for the Prevention and Treatment of Colorectal Cancer in Europe

**ZORANA MARAVIC**

Acting CEO

**digestivecancers.eu**

talk to us, we've been there.

# Zoom guidance

This session will be recorded

You can ask questions by writing in the Q&A box

You can use the chat function for your comments

# Colorectal Cancer (CRC) - Key Facts

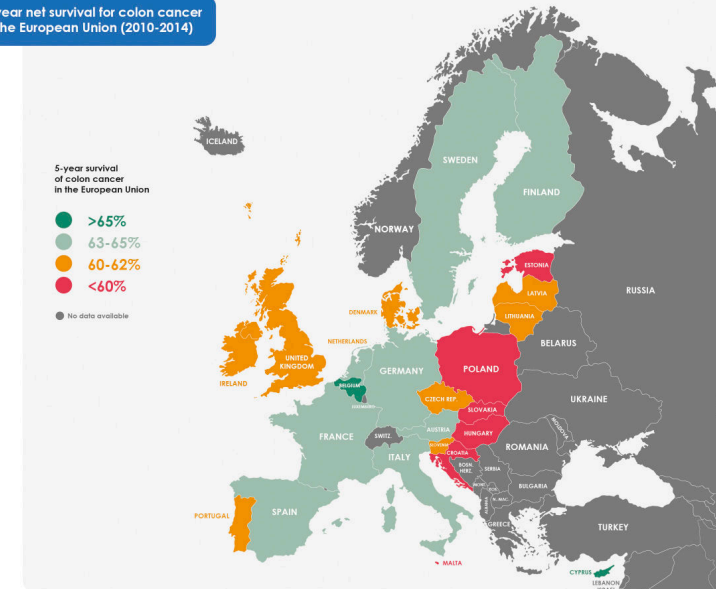

## European data

**1.6 million CRC survivors**

**Total cost in the EU 19 billion EUR**

5-year net survival for colon cancer in the European Union (2010-2014)

- Why are not all patients treated with the same care?
- Why are differences arising within the same country, where all patients can benefit from the same system?

I can tell you how to go through it together when you feel alone.

# The Roadmap

- Patients are treated sub-optimally
- Investments are not made to achieve the best possible results
- Tax-payers' money is being wasted

**The potential upside of applying best practices everywhere is huge, even without further technological innovation**

Covers all aspects related to the CRC management

**Designed by patients and experts**

- Prevention & screening
- Treatment
- Support
- Recommendations

# Prevention & Screening

	Stage I	Stage II	Stage III	Stage IV
Chance of survival	90%	75%	70%	10%
Netherlands and Slovenia have 48% of CRC patients diagnosed at stage I				
ESTIMATED COST (EUR)	4,000	25,000	30,000	40,000

**Only 14% of EU citizens between 50 and 74 year old have the opportunity to participate in a formal population-based CRC screening programme**

**> 55% could be prevented**

Active participation rate of citizens aged 50-74 years in colorectal cancer screening programmes

Active participation rate of target population between 50-74 years old

I can tell you how to go through it together when you feel alone.

# CRC Roadmap Recommendations (1)

**MS**

Invest more in prevention and citizen education on lifestyle choices and risk of disease

**MS**

Significantly increase the CRC screening efforts - they have demonstrated to save lives and money

# Treatment

- CRC patients have a greater chance of survival if they are operated in hospitals with a high case load

- Shared Decision-Making leads to higher patient satisfaction and less 'decision regrets'
- It is essential that patients are provided with the full picture of their diagnosis, treatment options and long-term consequences of both the disease and the treatment

- It may take many years from the approval by the EMA until the approval for pricing and reimbursement at the national level

Oncology median time to availability (2015 – 2018)

# CRC Roadmap Recommendations (2)

**MS**

No public money should be given to any healthcare stakeholder without the full demonstration of outcomes

**MS**

Reduce the number of treatment centers to specialised Comprehensive Cancer Networks

**MS**

Invest in access to new medicines; do not use delaying tactics for fiscal reasons

# CRC Roadmap Recommendations (3)

H

Apply all the international guidelines for cancer care in a systematic way

H

Hospitals that do not meet the requirements should associate themselves with a specialised cancer center

H

Hospitals should have systems of Shared Decision-Making so that patients can be fully informed

# Support

- 30-45% of cancer patients and survivors experience high levels of cancer-related distress
- During chemotherapy, weight loss occurs in 40%–92% of patients 65 years and older
  - CRC who received individualised nutritional counseling to maintain protein and energy intake experienced less treatment toxicity, better QoL, and lower mortality
- Physically active cancer survivors have a lower risk of cancer recurrence and improved survival compared with those who are inactive
  - Only 53% of physicians gave their cancer patients advice on physical activity

# CRC Roadmap Recommendations (4)

H

All patients should have access to the information on nutrition, physical activity and psychological support

H

Hospitals should refer patients to dedicated patient organisations immediately after diagnosis

PO

Work with hospitals to create the best possible services for patients after diagnosis

# CRC Roadmap Recommendations (5)

**PO**

Become the custodian of the patient journey, advocating from prevention to end of life to improve every step of the way

**PO**

Capture the collective intelligence of all members to give information and provide insights on how CRC treatment can be improved

**MS**

Support and fund POs, so that patients can achieve the full support needed throughout the patient journey

THANK YOU!
